OVERVIEW

The EX4600 line of Ethernet switches delivers data center class scale, high availability, and high performance to campus distribution deployments. The EX4600 offers fixed 10 Gpbs and modular 10 Gpbs and 40 Gbps ports, giving it the flexibility to also be implemented in data center top-of-rack and service provider aggregation deployments.

PRODUCT DESCRIPTION

Featuring up to 72 wire-speed 10GbE small form-factor pluggable and pluggable plus transceiver (SFP/SFP+) ports, and up to 12 wire-speed 40GbE quad SFP+ transceiver (QSFP+) ports in a compact one rack unit (1 U) platform, the Juniper Networks® EX4600 Ethernet Switch delivers 1.44 Tbps of Layer 2 and Layer 3 connectivity to networked devices such as secure routers, servers, and other switches. The EX4600 base switch provides 24 fixed 1GbE SFP/10GbE SFP+ ports and 4 fixed 40GbE QSFP+ ports, providing the flexibility to support mixed 1GbE, 10GbE and 40GbE environments. A total of four models are available: two featuring AC power supplies and front-to-back or back-to-front airflow; and two featuring DC power supplies and front-to-back or back-to-front airflow. Each model includes dual power supplies.

All versions feature two expansion slots that can accommodate optional expansion modules, providing tremendous configuration and deployment flexibility for enterprise distribution networks. Two expansion modules are available:

- 8xGBASE/10GBASE SFP/SFP+ fiber expansion module

- 4x40GbE QSFP+ expansion module

APPEARANCE

Figure 1. Juniper EX4600

FEATURES AND BENEFITS

EX4600 Ethernet switches include the following key features and benefits:

● **High performance:** Each EX4600 supports up to 1.44 Tbps of bandwidth or 1.07 Bpps at the minimum Ethernet frame size, with 24 line-rate 10GbE fixed ports, 4 40GbE fixed ports, and 2 expansion slots that can each support either a 4x40GbE module or an 8x10GbE module.

● **Unified in-service software upgrade (unified ISSU):** With its Intel core processor, the EX4600 switch allows Junos OS to run within a virtual machine (VM) on Linux. Junos OS runs in two separate VMs in active and standby pairs; during software upgrade cycles, the switches seamlessly move to the newer software version while maintaining intact data plane traffic. This true topology-independent ISSU (TISSU), an industry-first software upgrade feature for a fixed-configuration top-of-rack switch, is supported across all L2 and L3 protocols and doesn't need the support of any other switches to perform an image upgrade.

● **High availability:** EX4600 switches offer dual internal load-sharing AC power supplies and redundant variable-speed fans as standard features, protecting the switch from a single power supply or fan failure. DC power options are also available.

● **Automation:** The EX4600 switches support a number of features for network automation and plug-and-play operations. Features include zero touch provisioning (ZTP), operations and event scripts, automatic rollback, and Python scripting. The switch also offers support for integration with VMware NSX Layer 2 Gateway Services, Puppet, and OpenStack.

● **Energy efficient:** Consuming less than five watts per 10GbE interface, the EX4600 offers a low power solution for 10GbE top-of-rack, end-of-row, and distribution deployments. The EX4600 switches also improve cooling efficiency with redundant variable-speed fans that automatically adjust their speed based on existing conditions to reduce power consumption.

● **Small footprint:** The EX4600 supports up to 72 wire-speed 10GbE ports in a single 1 U platform.

● **Juniper Extension Toolkit:** An evolution of the Junos software developer's kit (SDK), Juniper Extension Toolkit (JET) provides a modern, programmatic interface for third-party application developers.

● Flexible forwarding table: The EX4600's flexible forwarding table allows the hardware table to be carved into configurable partitions of L2 media access control (MAC), L3 host, and longest prefix match (LPM) tables. In a pure Layer 2 environment, the EX4600 supports up to 288,000 MAC addresses. In Layer 3 mode, the table can support up to 128,000 host entries; in LPM mode, it can

support up to 128,000 prefixes. Junos OS provides configurable options through a CLI so that each EX4600 can be optimized for different deployment scenarios.

● **Intelligent buffer management:** EX4600 switches have a total of 12 MB shared buffers. While 25 percent of the total buffer space is dedicated, the rest is shared among all ports and is user configurable. The intelligent buffer mechanism in the EX4600 effectively absorbs traffic bursts while providing deterministic performance, significantly increasing performance over static allocation.

● **Insight technology for analytics:** The EX4600 provides dynamic buffer utilization monitoring and reporting with an interval of 10 milliseconds to provide microburst and latency insight. It calculates both queue depth and latency, and logs messages when configured thresholds are crossed. Interface traffic statistics can be monitored at two-second granularity. The data can be viewed via CLI, system log, or streamed to external servers for more analysis. Supported reporting formats include Java Script Object Notification (JSON), comma-separated values (CSV), and tab-separated values (TSV). These files can be consumed by orchestration systems, SDN controllers, or network management applications (such as Juniper Networks Junos Space Network Director) to make better network design decisions and identify network hotspots.

● **MPLS:** EX4600 switches support a broad set of MPLS features, including L2VPN, L3VPN, IPv6 provider edge router (6PE), RSVP traffic engineering, and LDP to allow standards-based network segmentation and virtualization. The EX4600 can be deployed as a low-latency MPLS label-switching router (LSR) or MPLS provider edge (PE) router in smaller scale environments. The EX4600 is the industry's only compact, low-latency, high-density, low-power switch to offer an MPLS feature set.

● **MACsec:** The EX4600 is capable of MACsec features on all 10GbE ports to support 400 Gbps of near line-rate hardware-based traffic encryption on all fiber ports, including the base unit and optional 10GbE expansion modules. MACsec in software will be enabled in a future release.

Additional Features

● System status LEDs

● Versatile two- and four-post rack mounting options

● Front-to-back and back-to-front airflow options

● AC and DC power supply options

● Spare chassis SKU without power supply or fans for sparing purposes

● Support for jumbo frames (9,000)

- Quality of service (IEEE 802.1p marking)

- Multicast (Internet Group Management Protocol v1/v2/v3 snooping)

- Layer 2 features including support for 4,096 VLAN IDs, Spanning Tree (802.1s and 802.1w), bridge protocol data unit (BPDU) guard, 802.3as Link Distribution

- Management features including Telnet and SSH v1/v2, SNMP v1-v3, RADIUS, TACACS+, and RMON

Table 1. Models of Juniper EX4600 Switches

SKU	Configuration	Power Consumption
EX4600-40F-AFO	- Fixed 10GbE ports with 10G-USR optics, all ports forwarding (line rate), <10 m	279 W
EX4600-40F-AFI		285 W
EX4600-40F-DC-AFO	- 4 fixed 40GbE ports with 40G-SR4 optics - 1 4x40GbE QIC card with 4 40G-SR4 optics	392 W
EX4600-40F-DC-AFI	- 1 8x10GbE QIC card with 8 10G-USR optics, all ports forwarding (line rate), <10 m - Dual power supplies	320 W

SPECIFICATIONS

Table 2. Specifications of Juniper EX4600 Switches

Physical Specifications	
Hardware	- Switching capacity: 720 Gbps (unidirectional)/1.44 Tbps (bidirectional) - Layer 2/Layer 3 throughput (maximum with 64 byte packets): 1,071 Mpps (wire speed) - Weight: 21.7 lb (9.84 kg) with PSUs and fans installed - Dimensions (HxWxD): 1.72 x17.36 x 20.48 in (4.37 x 44.09 x 52.02 cm) - Switching mode: Cut-through and store-and-forward - Front-to-back or back-to-front airflow (for hot aisle/cold aisle deployment) - Management and rear console port connections - Predicted mean time between failures (MTBF): 150,000 hours

	● Predicted FIT rate: 4,987
Interface Options	● 1GbE SFP: 24(40) (with 10GbE expansion modules)
	● 10GbE SFP+: 24(40/72) (with 10GbE expansion modules/with fixed 40GbE ports using breakout cables)
	● 40GbE QSFP+: 4(12) (with expansion modules)
	- Each fixed QSFP+ port can be configured as a 4x10GbE interface
	- Each QSFP+ port can be configured as a 40 Gbps port
	- USB port
	- Console port
	- 2 management ports: 1 RJ-45 and 1 SFP
	- Supported transceiver and direct attach cable
	- SFP+ 10GbE optical modules
	- SFP+ DAC cables: 1/3/5 m direct-attached copper and 1/3/5/7/10 m active direct-attached copper
	- SFP GbE optical and copper module
	- QSFP+ to SFP+ 10GbE direct attach break-out copper (1/3 m direct-attached copper cable)
Rack Installation Kit	● Versatile four post mounting options for 19-in server rack or datacom rack
Airflow	● Front-to-back and back-to-front cooling
	● Redundant variable-speed fans to reduce power draw
Power Supply and Fan Modules	● Dual redundant (1+1) and hot-pluggable power supplies
	● 110-240 V single phase AC power
	● -36 to -72 V DC power
	● Redundant (N+1) and hot-pluggable fan modules for front-to-back and back-to-front airflow
Performance Scale (Unidimensional)	● MAC addresses per system: 288,000*
	● VLAN IDs: 4,091
	● Number of ports per LAG: 32
	● FCoE scale:
	- Number of FCoE VLANs/FC virtual fabrics: 4,095
	● Firewall filters: 4,000

	- IPv4 unicast routes: 128,000 prefixes; 208,000 host routes; 64 ECMP paths (roadmap) IPv4 multicast routes: 104,000 - IPv6 multicast routes: 52,000 - IPv6 unicast routes: 64,000 prefixes - Address Resolution Protocol (ARP) entries: 48,000 - Jumbo frame: 9,216 bytes * MAC address table uses a hash-based scheme to program entries; therefore, some entries may not be programmed due to hash index collision.
Access Control Lists (ACLs)	- Port-based ACL (PACL): Ingress and egress - VLAN-based ACL (VACL): Ingress and egress - Router-based ACL (RACL): Ingress and egress - ACL entries (ACE) in hardware per system: - Ingress ACL: 1,536 - Egress ACL: 1,024 - ACL counter for denied packets - ACL counter for permitted packets - Ability to add/remove/change ACL entries in middle of list (ACL editing) - L2-L4 ACL - IPv6 ACL - Firewall filter on loopback interface - Firewall filter on management interface
Spanning Tree Protocol (STP)	- Multiple Spanning Tree Protocol (MSTP) instances: 64 - VLAN Spanning Tree Protocol (VSTP) instances: 253
Traffic Mirroring	- Mirroring destination ports per switch: 4 - Maximum number of mirroring sessions: 4 - Mirroring destination VLANs per switch: 4
Layer 2 Features	- STP—IEEE 802.1D (802.1D-2004) - Rapid Spanning Tree Protocol (RSTP) (IEEE 802.1w); MSTP (IEEE 802.1s) - Bridge protocol data unit (BPDU) protect - Loop protect

	● Root protect
	● RSTP and VSTP running concurrently
	● VLAN—IEEE 802.1Q VLAN trunking
	● Routed VLAN interface (RVI)
	● Port-based VLAN
	● MAC address filtering
	● GRE tunneling
	● QinQ (roadmap)
	● VLAN translation
	● Static MAC address assignment for interface
	● Per VLAN MAC learning (limit)
	● MAC learning disable
	● Link Aggregation and Link Aggregation Control Protocol (LACP) (IEEE 802.3ad)
	● IEEE 802.1AB Link Layer Discovery Protocol (LLDP)
	● MAC notification
	● MAC address aging configuration
	● MAC address filtering
	● Persistent MAC (sticky MAC)
Link Aggregation	● Multichassis link aggregation (MC-LAG) - Layer 2, Layer 3, VRRP, STP
	● Redundant trunk group (RTG)
	● LAG load sharing algorithm—bridged or routed (unicast or multicast) traffic:
	● IP: SIP, Dynamic Internet Protocol (DIP), TCP/UDP source port, TCP/UDP destination port
	● Layer 2 and non-IP: MAC SA, MAC DA, Ethertype, VLAN ID, source port
	● FCoE packet: Source ID (SID), destination ID (DID), originator exchange ID (OXID), source port
Layer 3 Features (IPv4)	● Static routing
	● Routing policy
	● Routing protocols (RIP, OSPF, IS-IS, BGP, MBGP)
	● Virtual Router Redundancy Protocol (VRRP)

	● Bidirectional Forwarding Detection (BFD) protocol
	● Virtual router
	● Dynamic Host Configuration Protocol (DHCP) relay
	● Proxy Address Resolution Protocol (ARP)
	● Multicast Features
	● Internet Group Management Protocol (IGMP): v1, v2, v3
	● IGMP snooping: v1, v2, v3
	● IGMP filter
	● PIM-SM
	● Multicast Source Discovery Protocol (MSDP)
	● Security and Filters
	● Secure interface login and password
	● RADIUS
	● TACACS+
	● Ingress and egress filters: Allow and deny, port filters, VLAN filters, and routed filters, including management port filters
	● Filter actions: Logging, system logging, reject, mirror to an interface, counters, assign forwarding class, permit, drop, police, mark
	● SSH v1, v2
	● Static ARP support
	● Storm control, port error disable, and autorecovery
	● Control plane denial-of-service (DoS) protection
	● Dynamic ARP inspection (DAI)
	- Sticky MAC address
	● DHCP snooping
	● Filter based forwarding
	● IP directed broadcast traffic forwarding
	● IPv4 over GRE (encap and decap)
Layer 3 Features (IPv6)	● Static routing
	● Routing protocols (RIPng, OSPF v3, IS-IS v6, BGP v6)
	● Virtual Router Redundancy Protocol (VRRP v3)

	● IPv6 CoS (BA, MF classification and rewrite, scheduling based on TC) ● IPv6 over MPLS LSPs (6PE) ● IPv6 ping ● IPv6 traceroute ● Neighbor discovery protocol ● Path MTU discovery ● SNMP, NTP, DNS, RADIUS, TACACS+, AAA ● Virtual router support for IPv6 unicast

Quality of Service (QoS)	● L2 and L3 QoS: Classification, rewrite, queuing
	
	● Rate limiting:
	
	  - Ingress policing: 1 rate 2 color, 2 rate 3 color
	
	  - Egress policing: Policer, policer mark down action
	
	  - Egress shaping: Per queue, per port
	
	● 12 hardware queues per port (8 unicast and 4 multicast)
	
	● Strict priority queuing (LLQ), smoothed deficit weighted round-robin (SDWRR), weighted random early detection (WRED), weighted tail drop
	
	● 802.1p remarking
	
	● L2 classification criteria: Interface, MAC address, Ethertype, 802.1p, VLAN
	
	● Congestion avoidance capabilities: WRED
	
	● Trust IEEE 802.1p (ingress)
	
	● Remarking of bridged packets
	
	● Priority-based flow control (PFC)—IEEE 802.1Qbb
	
	● Data Center Bridging Exchange Protocol (DCBX), DCBx FCoE, and iSCSI type, length, and value (TLVs)
	
	● Fibre Channel over Ethernet (FCoE)
	
	● FCoE transit switch (FIP snooping ACL installation)
	
	● Virtual fiber channel gateway
	
	● FCoE session path learning
	
	● FCoE session health monitoring
	
	● Graceful restart for FIP snooping
	
	● FC-BB-6 VN2VN snooping

Virtual Chassis	40GbE and 10GbE as Virtual Chassis port - Virtual Chassis Routing Engine (RE) election - Virtual Chassis pre-provisioning (plug and play) - Auto-LAG formation of Virtual Chassis ports - Mixed Virtual Chassis support between EX4300-EX4600 (in data center only) - FCoE transit across Virtual Chassis members - QoS on Virtual Chassis ports - Local designated forwarding - Graceful RE switchover (GRES) - Nonstop routing (NSR) - Nonstop bridging (NSB) - Monitor distributed aggregate interface - Control plane protection for virtual RE
High Availability	- ISSU (in standalone and MC-LAG configuration) - Bidirectional Forwarding Detection (BFD) - Uplink failure detection (UFD) - Graceful Routing Engine switchover (GRES) in Virtual Chassis configuration - Non-stop bridging (NSB) in Virtual Chassis configuration - Non-stop routing (NSR) in Virtual Chassis configuration - Non-stop software upgrade (NSSU) in Virtual Chassis configuration
MPLS	- VRF-Lite 2-label stack - Static label-switched paths (LSPs) - RSVP-based signaling of LSPs - LDP-based signaling of LSPs - LDP tunneling (LDP over RSVP) - MPLS class of service (CoS) - MPLS access control list (ACL)/policers - MPLS LSR support - Push, swap, pop, IP lookup

	• IPv6 tunneling (6PE) (via IPv4 MPLS backbone)
	• MPLS Operation, Administration, and Maintenance (OAM)
	• LSP ping
	• IPv4 L3VPN (RFC 2547, 4364)
	• Ethernet-over-MPLS (L2 circuit)
	• Layer 3 VPN (L3VPN)
	• Layer 2 VPN (L2VPN)
	• Link protection
	• MPLS fast reroute (FRR)- 1:1 Protection
	• Node-link protection
Management and Operations	• Junos Space Network Director (roadmap)
	• Role-based CLI management and access
	• CLI via console, telnet, or SSH
	• Extended ping and traceroute
	• Junos OS configuration rescue and rollback
	• Image rollback
	• SNMP v1/v2/v3
	• Junos XML management protocol
	• sFlow v5
	• DHCP server
	• DHCP relay on L2 VLAN & L3 interfaces (with option 82)
	• DHCP local server support
	• High frequency statistics collection
	• Beacon LED for port and system
	• Automation and orchestration
	• Zero touch provisioning (ZTP)
	• OpenStack Neutron Plug-in
	• Puppet
	• Chef
	• Junos OS event, commit, and operations scripts

	● Ability to execute scripts written in Python/TCL/Perl
Traffic Mirroring	● Port-based
	● LAG port
	● VLAN-based
	● Filter-based
	● Mirror to local
	● Local/L2 remote analyzer (SPAN, RSPAN for IPv4 and IPv6 frames)
	● Mirror to remote destinations (L2 over VLAN)
	● Insight Technology (microburst monitoring and statistics reporting)
Standards Compliance	
IEEE Standards	● IEEE 802.1D
	● IEEE 802.1w
	● IEEE 802.1
	● IEEE 802.1Q
	● IEEE 802.1p
	● IEEE 802.1ad
	● IEEE 802.3ad
	● IEEE 802.1AB
	● IEEE 802.3x
	● IEEE 802.1Qbb
	● IEEE 802.1Qaz
	● IEEE 802.1Qau (roadmap)
	● IEEE 802.1Qbg (roadmap)
Supported RFCs	● RFC 768 UDP
	● RFC 783 Trivial File Transfer Protocol (TFTP)
	● RFC 791 IP
	● RFC 792 ICMP
	● RFC 793 TCP
	● RFC 826 ARP
	● RFC 854 Telnet client and server

- RFC 894 IP over Ethernet

- RFC 903 RARP

- RFC 906 TFTP Bootstrap

- RFC 951 1542 BootP

- RFC 1058 Routing Information Protocol

- RFC 1112 IGMP v1

- RFC 1122 Host requirements

- RFC 1142 OSI IS-IS Intra-domain Routing Protocol

- RFC 1256 IPv4 ICMP Router Discovery (IRDP)

- RFC 1492 TACACS+

- RFC 1519 Classless Interdomain Routing (CIDR)

- RFC 1587 OSPF not-so-stubby area (NSSA) Option

- RFC 1591 Domain Name System (DNS)

- RFC 1745 BGP4/IDRP for IP—OSPF Interaction

- RFC 1772 Application of the Border Gateway Protocol in the Internet

- RFC 1812 Requirements for IP Version 4 routers

- RFC 1997 BGP Communities Attribute

- RFC 2030 SNTP, Simple Network Time Protocol

- RFC 2068 HTTP server

- RFC 2131 BOOTP/DHCP relay agent and Dynamic Host

- RFC 2138 RADIUS Authentication

- RFC 2139 RADIUS Accounting

- RFC 2154 OSPF w/Digital Signatures (Password, MD-5)

- RFC 2236 IGMP v2

- RFC 2267 Network ingress filtering

- RFC 2328 OSPF v2 (edge mode)

- RFC 2338 VRRP

- RFC 2362 PIM-SM (edge mode)

- RFC 2370 OSPF Opaque link-state advertisement (LSA) Option

- RFC 2385 Protection of BGP Sessions via the TCP Message Digest 5 (MD5)
Signature Option

	● RFC 2439 BGP Route Flap Damping
	● RFC 2453 RIP v2
	● RFC 2474 Definition of the Differentiated Services Field in the IPv4 and IPv6 Headers
	● RFC 2597 Assured Forwarding PHB (per-hop behavior) Group
	● RFC 2598 An Expedited Forwarding PHB
	● RFC 2697 A Single Rate Three Color Marker
	● RFC 2698 A Two Rate Three Color Marker
	● RFC 2796 BGP Route Reflection—An Alternative to Full Mesh IBGP
	● RFC 2918 Route Refresh Capability for BGP-4
	● RFC 3065 Autonomous System Confederations for BGP
	● RFC 3376 IGMP v3 (source-specific multicast include mode only)
	● RFC 3392 Capabilities Advertisement with BGP-4
	● RFC 3446 Anycast RP
	● RFC 3569 SSM
	● RFC 3618 MSDP
	● RFC 3623 Graceful OSPF Restart
	● RFC 4271 Border Gateway Protocol 4 (BGP-4)
	● RFC 4360 BGP Extended Communities Attribute
	● RFC 4456 BGP Route Reflection: An Alternative to Full Mesh Internal BGP (IBGP)
	● RFC 4486 Subcodes for BGP Cease Notification Message
	● RFC 4724 Graceful Restart Mechanism for BGP
	● RFC 4812 OSPF Restart Signaling
	● RFC 4893 BGP Support for Four-octet AS Number Space
	● RFC 5176 Dynamic Authorization Extensions to RADIUS
	● RFC 5396 Textual Representation of Autonomous System (AS) Numbers
	● RFC 5668 4-Octet AS Specific BGP Extended Community
	● RFC 5880 Bidirectional Forwarding Detection (BFD)
	● Dynamic Host Configuration Protocol (DHCP) server
Supported MIBs	● RFC 1155 SMI

- RFC 1157 SNMPv1

- RFC 1212, RFC 1213, RFC 1215 MIB-II, Ethernet-Like MIB, and TRAPs

- RFC 1850 OSPFv2 MIB

- RFC 1901 Introduction to Community-based SNMPv2

- RFC 2011 SNMPv2 for Internet protocol using SMIv2

Environmental Compliance	● Restriction of Hazardous Substances (ROHS) 6/6

	- China Restriction of Hazardous Substances (ROHS)
	- Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH)
	- Waste Electronics and Electrical Equipment (WEEE)
	- Recycled material
	- 80 Plus Silver PSU Efficiency
Telco	- Common Language Equipment Identifier (CLEI) code
Environmental Ranges	- Operating temperature: 32° to 104° F (0° to 40° C)
	- Storage temperature: -40° to 158° F (-40° to 70° C)
	- Operating altitude: up to 2,000
	- Relative humidity operating: 5% to 90% (noncondensing)
	- Relative humidity nonoperating: 0% to 95% (noncondensing)

ORDERING INFORMATION

Table 3. Ordering information

Product number	Product description
Switch Hardware	
EX4600-40F-AFO	24 SFP+/SFP ports, 4 QSFP+ ports, 2 expansion slots, redundant fans, 2 AC power supplies, 2 power cords, 4-post rack mount kit, and front to back airflow
EX4600-40F-AFI	24 SFP+/SFP ports, 4 QSFP+ ports, 2 expansion slots, redundant fans, 2 AC power supplies, 2 power cords, 4-post rack mount kit, and back to front airflow
EX4600-40F-DC-AFO	24 SFP+/SFP ports, 4 QSFP+ ports, 2 expansion slots, redundant fans, 2 DC power supplies, 2 power cords, 4-post rack mount kit, and front to back airflow
EX4600-40F-DC-AFI	24 SFP+/SFP ports, 4 QSFP+ ports, 2 expansion slots, redundant fans, 2 DC power supplies, 2 power cords, 4-post rack mount kit, and back to front airflow

Modules and Spares	
JPSU-650W-AC-AFI	AC 650 W PSU, back-to-front airflow for EX4600-48S
JPSU-650W-DC-AFI	DC 650 W PSU, back-to-front airflow for EX4600-48S
Optics and Transceivers	
QFX-QSFP-DAC-3M	QSFP+ to QSFP+ Ethernet Direct Attach Copper (direct-attached copper cable) 3 m passive
